Features

• Current Sharing

Current sharing is used to balance the load between up to 10 units working in parallel. Even more units can be paralleled with special care. Contact Polyamp.

• Extra output with series diode

Use the series diode output when the output is connected in parallel with other power supplies to achieve redundancy.

• External output voltage sense

External sense is used when the voltage regulation at the load is critical.

The sense can compensate voltage drops up to 5% of the nominal voltage.

• Inrush current limit

Models with input code C and D have an active inrush current limit. I peak <6xInom.

• Over voltage protection OVP

The output voltage is limited to 15% over nominal output voltage by an extra regulation circuit.

• Over / Under voltage alarm

The built in relay changes to alarm state if the converter output voltage is not within 90% to 115% of nominal output.

The user can select NO or NC relay function.

The relay rating is 30V 0.5A (d.c. or a.c.)

• Inhibit input / Power down

The converter will shutdown if the inhibit input is short-circuit by a relay or electrical switch.

The current through the short-circuit is 20mA.

Note that there is no electrical isolation between the inhibit and the output.

• Reverse input voltage protection

All PU600 has input reverse protection.

On input code B with a parallel diode, which is dimensioned to blow an external input fuse.

Other inputs use a input series thyristor.

Optional Features

• EN/IEC61000-4-5 level 4

Input filter to meet level 4 of 61000-4-5 (+/-2kV line to line, 4kV line to ground).

• Train input

Input voltage range according to train standard EN50155 and IEC60571.

• Mounting bracket L-300-1

See figure 3.

• Vertical mount 19"-rack

Up to 4 units can be mounted vertically with L480-2, see figure 2.
